These pages provide you with an example of the layout and style for 100% reproduction which we wish you to adopt during the preparation of your one-page extended abstract. Though it's possible to submit your paper in 'Microsoft Word' format, members of the Proceedings Committee of SPVM will still convert your paper into L^AT_EX format. These instructions are based on `espcrc2.tex` from Elsevier Science Publishers Company.

All instructions are the same when preparing a three-page paper (see SPVM author instructions for the preparation of a 2-column format paper.), except that there are no sections and subsections.

Text should be produced on a two-sided US Letter-sized (8.5" × 11.0") paper within the dimensions shown on these pages. The margins are all 1.00", except for the inner side of 1.5", which will be used for binding the pages. The text has one column with a total width of 6.00" and a total height of 9.00". The page headers are located 4 mm from the top edge of the page. For those authors who would like to submit their paper in 'Microsoft Word' format, the formatters from SPVM Proceedings Committee will be the one to add the headers.

Put an 8-mm vertical white spaces before the title starts. See to it that the title, with font-size of 14pt, is centered. All words should be bold-faced and capitalize only the first letter of the title.

Complete names of authors, including the middle initials, should be listed after a one-line vertical distance from the title. Names should be separated by a comma and there should be an addressmark at every author's name to indicate his/her affiliation. However, if all authors have the same affiliation, then no need to put an addressmark in every author's name. Affiliations, separated by a one-line vertical distance, should include the name of the office/department and its corresponding address. No need to place an additional mark to identify the corresponding and/or presenting author.

We normally recommend the use of 1.0 (single) line spacing. However, when typing complicated mathematical text, you should increase the space between text lines in order to prevent sub- and superscript fonts overlapping one another and making your printed matter illegible. These instructions have been produced using a 11 point Computer Modern Roman. Other recommended fonts are 11 point Times New Roman, New Century Schoolbook, Bookman Light and Palatino.

Do not include figures and tables in the abstract. Please do not forget to include at least five keywords.

Keywords: SPVM, instructions, one-page, abstract, L^AT_EX 2_ε
